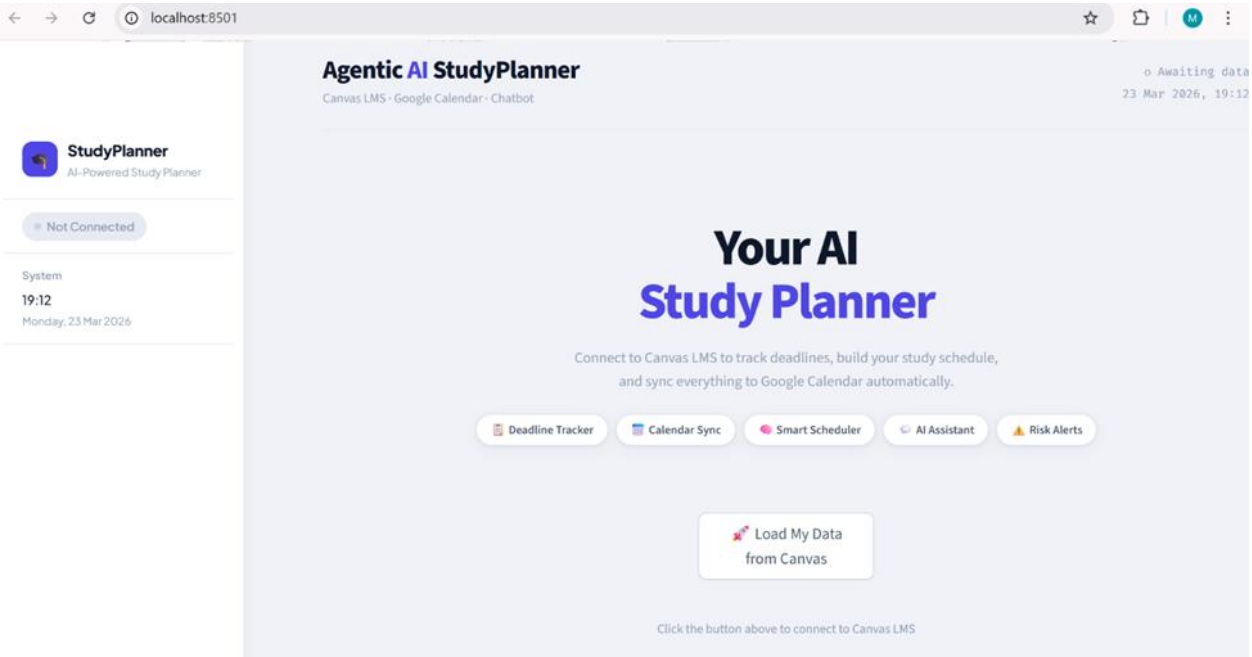
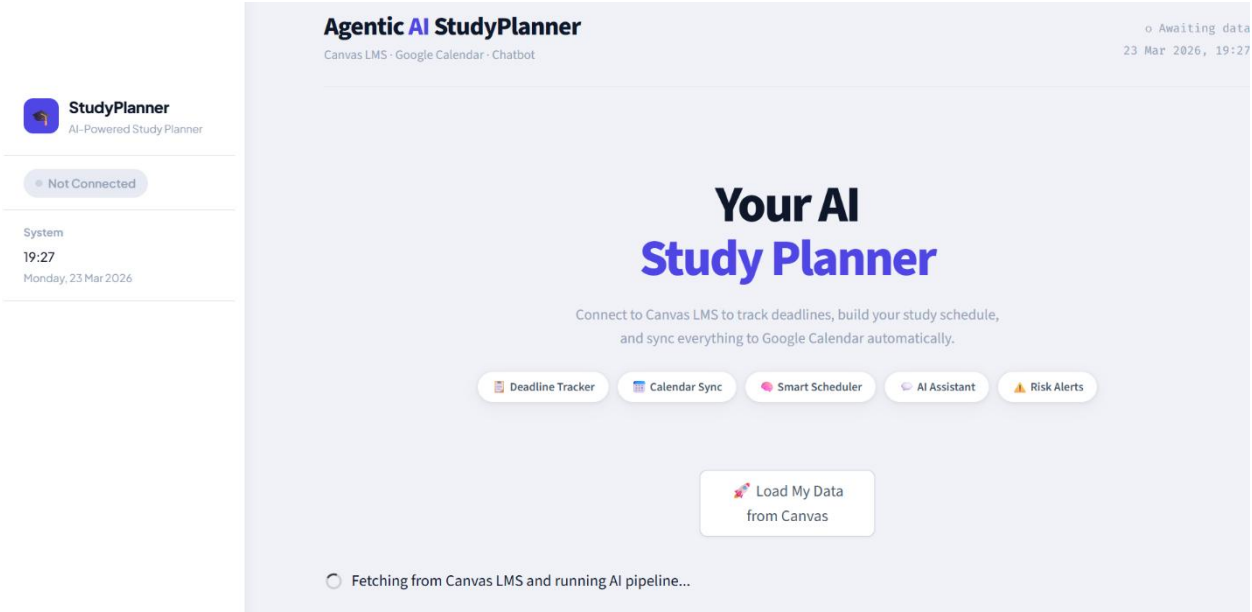
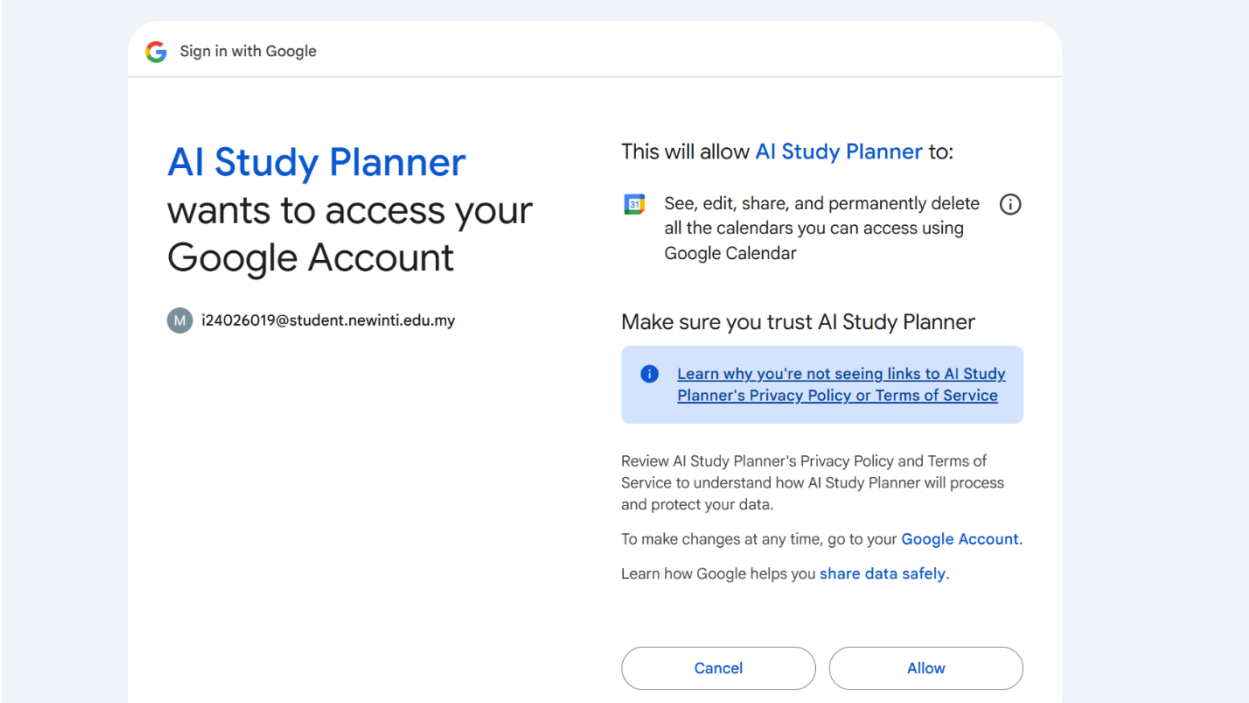
This section includes the system demonstration of the Agentic AI Personalized Student Assistant with its key features showcased and the workflow described in the form of a set of screenshots. The system will have Canvas to automatically access assignment deadlines, and Google Calendar to enable effective scheduling to work well with the system. It also offers a powerful dashboard, assignment tracking, smart study planning, risk alerts and an AI-driven assistant chatbot to boost productivity of students. The screenshots below will explain the way each of the components works effectively.

Dashboard during initial startup

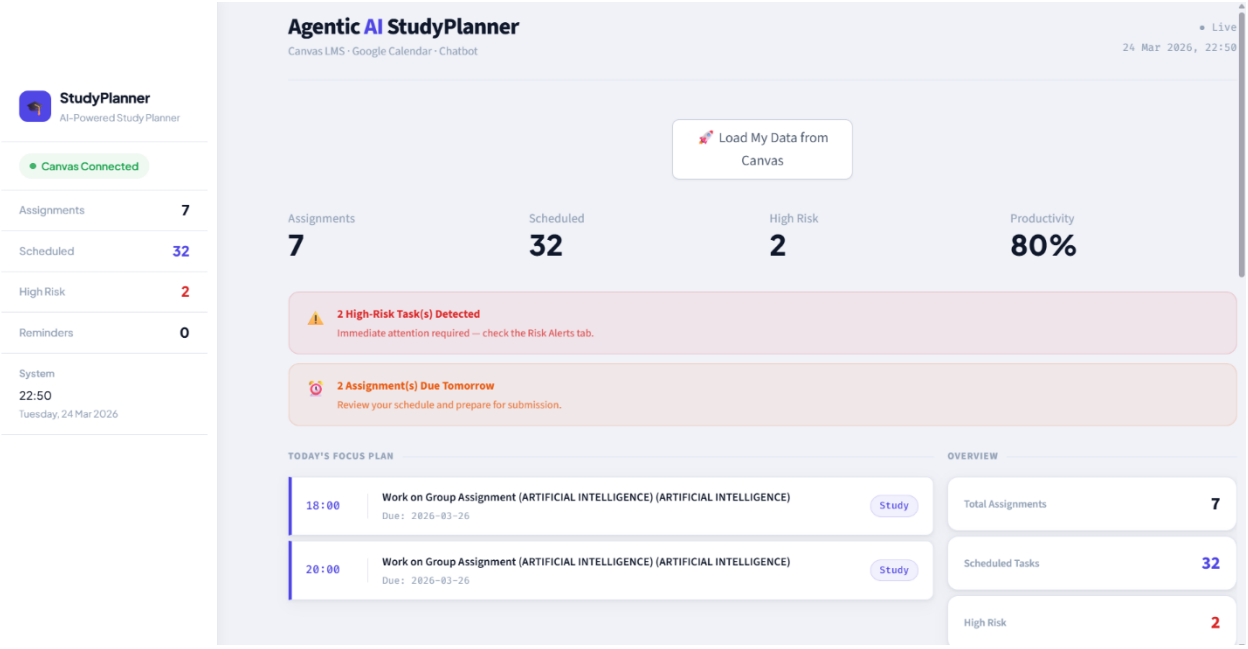






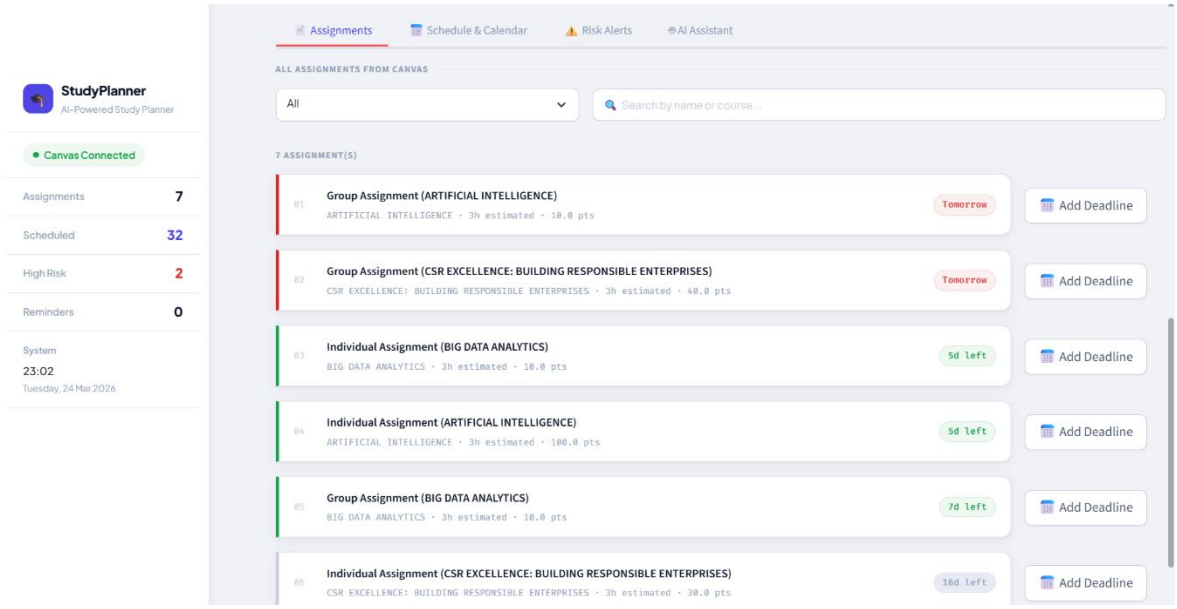
These screenshots display the dashboard of the system at its start-up as the application will have a button to prompt the student to load their assignment data from Canvas first and authenticates the user with their Google Calendar. With this integration, academic tasks and scheduling features will result in seamless synchronization.

Dashboard after data has been loaded



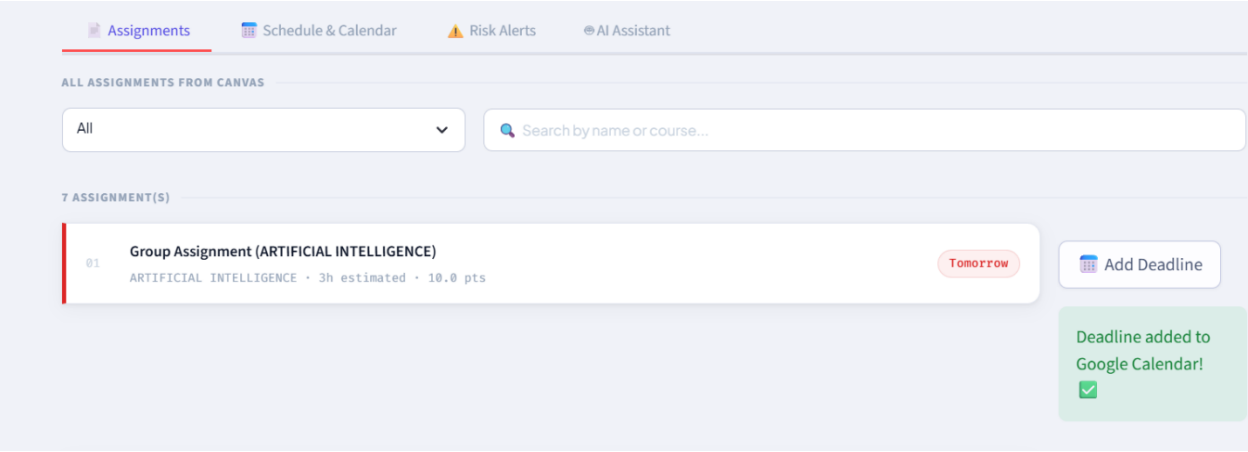
The main dashboard appears after loading the data in this screenshot. It gives a summary of the assignments the student has, the scheduled activities to be completed, the risk warning, and the productivity score. It also creates timetables and reminds of key deadlines automatically to help time management.

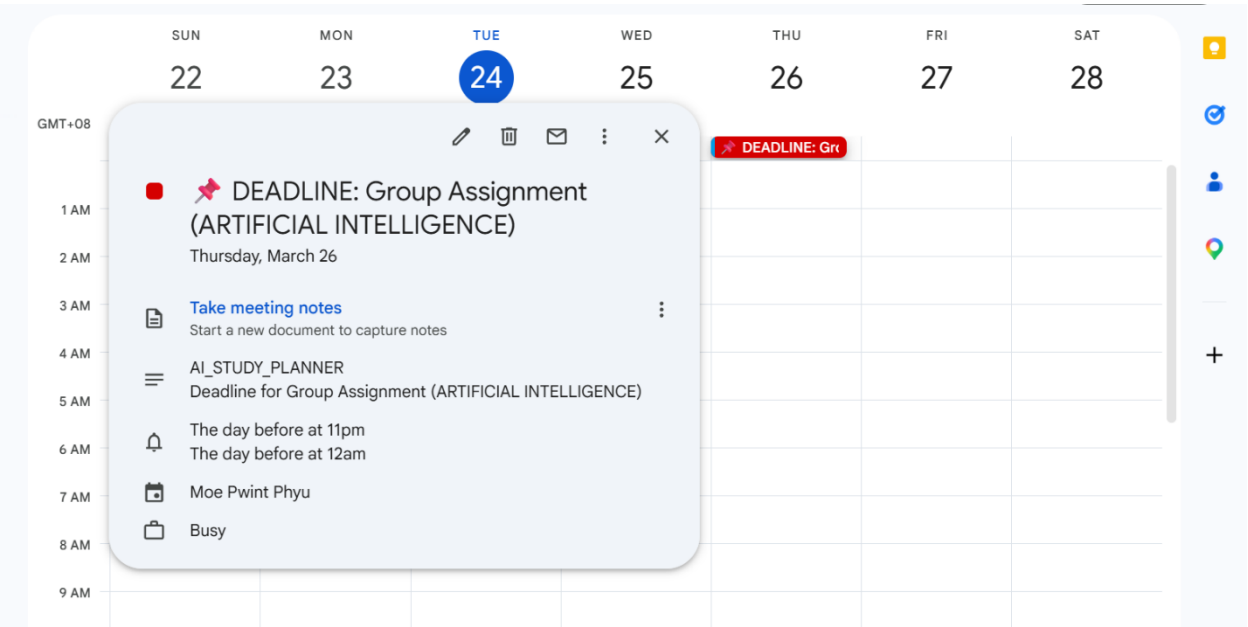
Assignments Tab



The Assignment Tab in this screenshot shows all assignment deadlines stored within Canvas. It gives students easy monitoring of their tasks and has an option that lets them add or sync

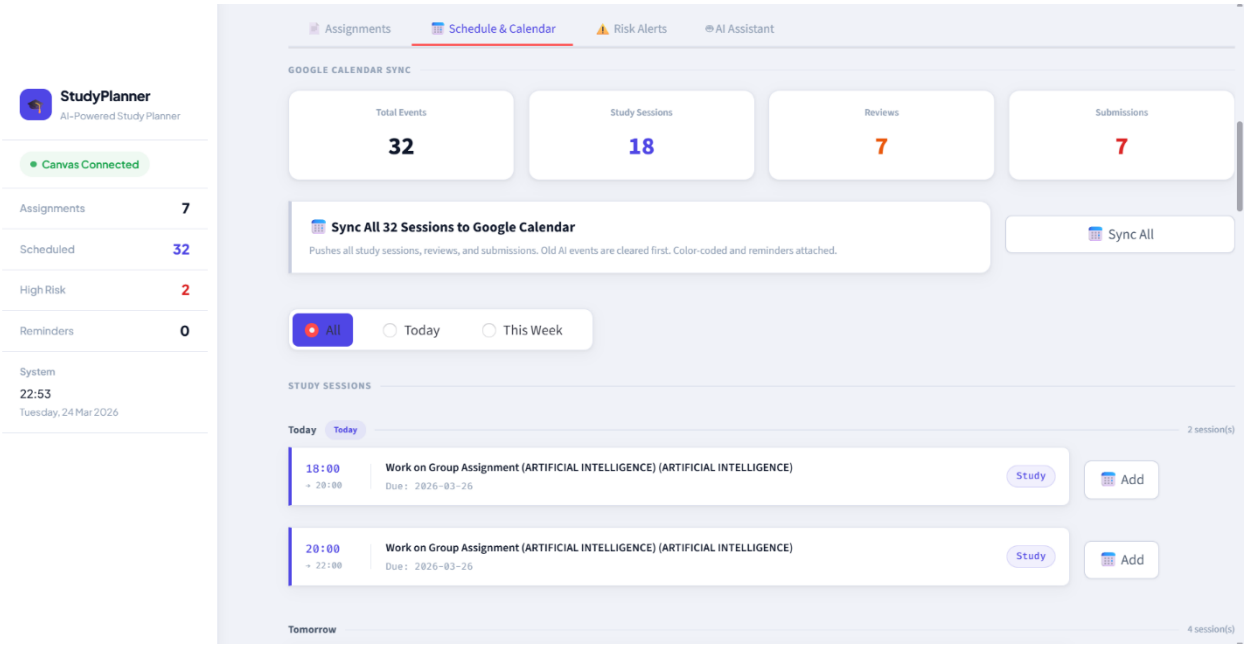
each assignment due date to Google Calendar so that they can organize effectively, which is shown below.

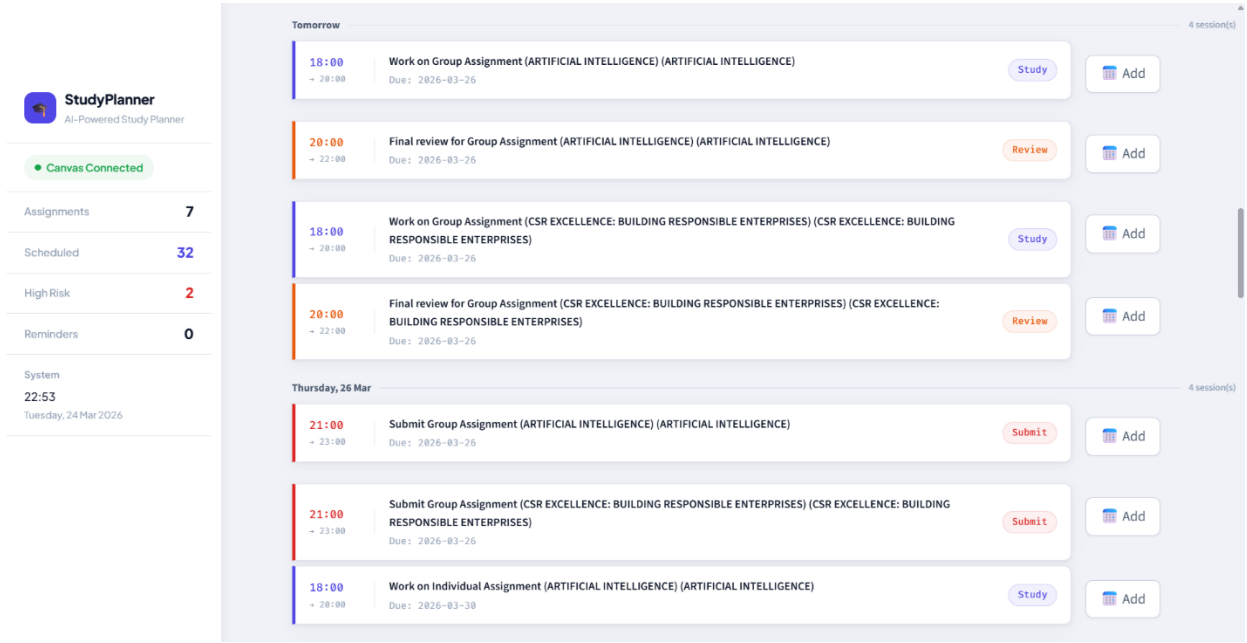




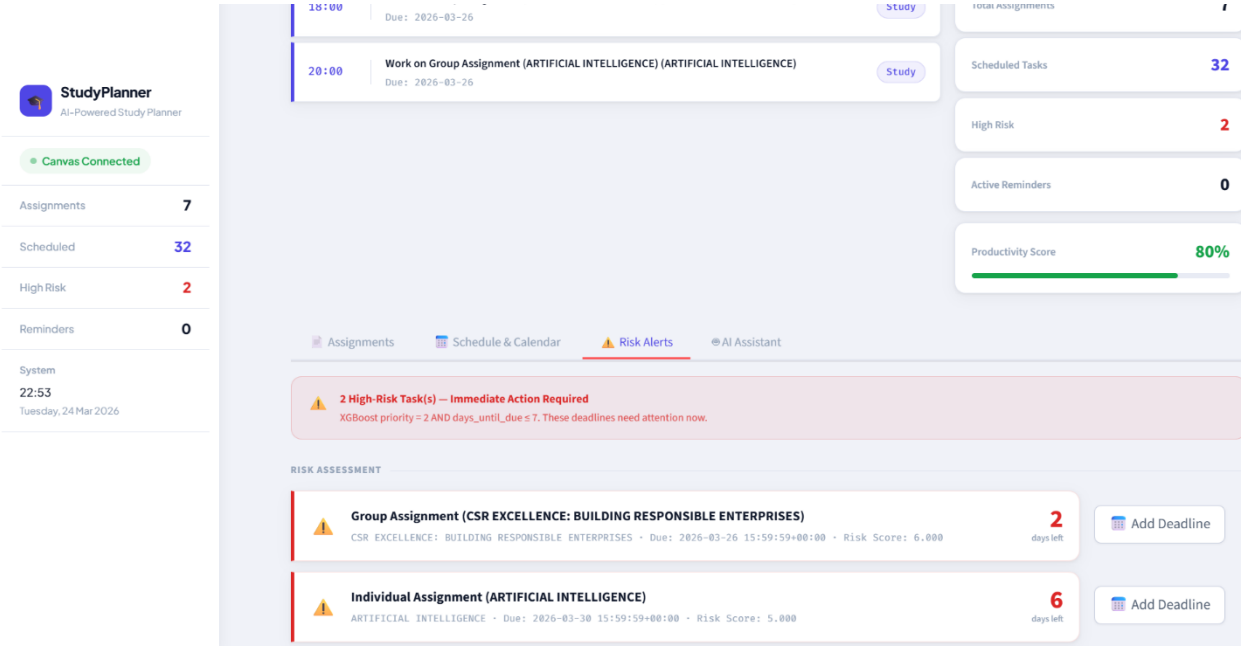
Schedule & Calendar Tab

The screenshots below show the Schedule and Calendar Tab, where the system sets personalized study plan based on the due dates of the assignments. The timetable assists students to spend their study time effectively.





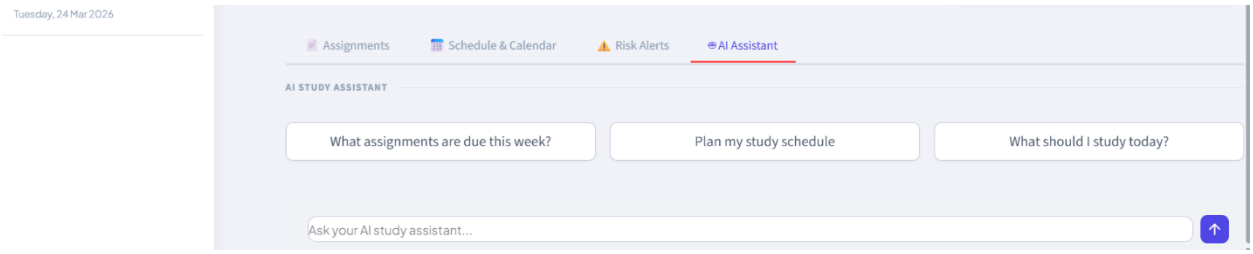
Risk Alerts Tab

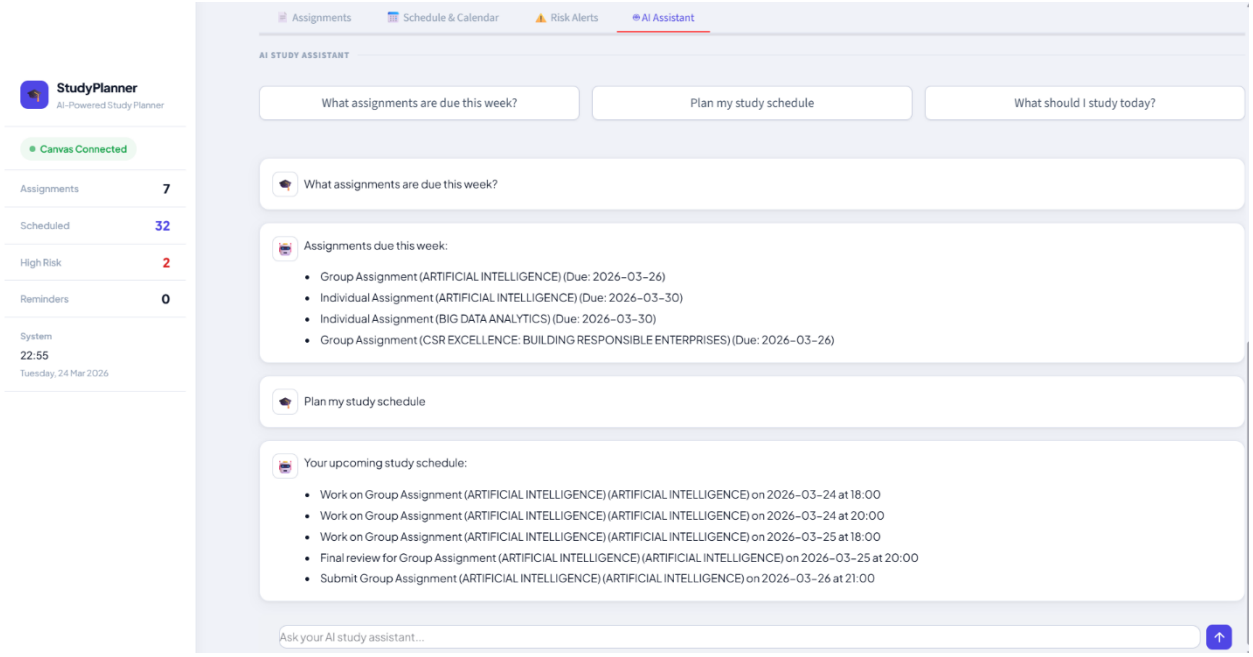


Here in this screenshot, it displays the Risk Alert Tab indicating high-risk assignments or urgent assignments that must be dealt with immediately. It enables the student to manage his or her future commitments and not miss important deadlines.

AI Assistant Tab

The screenshots below show the AI Assistant option which offers an interactive chatbot to help students. The chatbot will assist with the planning, question answering, and productivity. It also contains recommended prompts to enable users to get started.





Synchronization to Google Calendar

The calendar synchronization features are emphasized in the screenshots below. Users are able to either add or synchronize one study session or event to Google Calendar or to synchronize all events so that they are planned accordingly throughout the calendar automatically, which can be seen in the last screenshot.
